NO MORE AI SLOP SLIDES

A guide for AI tools (and you).

AI makes slides fast, and most are unreadable slop.

> *Tiny fonts, stacked boxes, and bullet walls bury the point.*

“When trying to communicate an idea, the best story wins.”

AI forgets this. Shape the story first, then build the slides.

Before slide one, make your AI ask who is in the room.

01 Who is in the room, and what matters?

02 Do they need an idea, or a decision?

03 If your agent is guessing, make it ask.

Map beginning, middle, and end before any layout.

BEGINNING	Land the problem in 3 slides.
MIDDLE	Explore the real solution.
END	Call out the exact next step.

Read only the headlines, and the story should land.

Next Steps

STORY HEADERS

The best story wins.

Most decks miss this.

Start with the room.

Drop below 30pt, and you are putting slop on the slide.

30pt

MINIMUM FONT SIZE

Why say many word when few word do trick. Slides are free.

Real screenshots beat walls of text and AI clip art.

> *Skip AI clip art. Show real pages, posts, or photos as proof.*

Use scale and whitespace before adding boxes.

TWO LAYERS MAX

One headline, one body. Cut the boxes.

EARN EVERY SHIFT

Keep one palette. Earn every dark slide.

Always show your audience where they are in the story.

Look at the top edge of this slide. Visual breadcrumbs tie the deck together.

Pressure-test your deck with digital twins of the room.

THE REAL ROOM

Build twins from the invite to catch gaps.

MATTHEW LUHN

Add a Pixar twin to check the story spine.

Twin review caught four flaws in this exact deck.

01 Cut four filler signpost slides.

02 Dropped narrow boxes that broke 30pt.

03 Killed a cramped five-node chart.

04 Added the .md link and sample decks.

Give your agent three things before your next deck.

01 ricky.robinett.ai/noslopslides.md

02 Link a template deck you actually like.

03 Netflix, How Google Works, Steal This.

Slides are free.
Attention is not.
